

**Case#1. Senior XV**

67 year old male, with a past history of type II Diabetes from 1981.

Two amputated toes on the right foot; on the heel of the left foot - ulcer with the deep cavity in the centre of the heel which appeared on December 2004.

RIKTA treatment was introduced on February, 2005: first 14 procedures - daily, then – twice-weekly treatment was administered to the ulcer site. Exposure time of every procedure – 25-30 min. The total number of procedures per course during 3 months is 30.

Contact method was applied directly on a wound and on all perimeter of the ulcer site where inflammation and edema of diabetic foot was.
