

Case #2. Seniora DXR

75 year old female, with a past history of type I Diabetes from 1992. The amputation of the toe on the right foot was done on June 2, 2005. Quantum therapy on the place of the toe amputated (15 procedures with exposure time 10 - 15 min during the month) was applied from July 1 to August 8, 2005 up to the full wound healing.

This demonstrates the fact that quantum therapy in treatment and cicatrisation of wounds may apply as the alternative of skin grafting.
